P0. Practice Problem

Problem Description.

Before you start participating in the Hackathon let's use a simple problem for you to become

familiar with the way you must code your programs for submission.

Your task is to...

Given an input via stdin containing n integers, the first line represents the number (one number per line) of lines below it. Read the numbers a, b and c from the following three lines of f and print their sum; if stdin contains less than three numbers, print ERROR.

Sample Input:	Output to be printed:
7	
5	14
3	
6	

Sample Input:	Output to be printed:
2	
3	ERROR
2
